About Me.

I'm a software developer who enjoys making things with web technologies. I've worked on different projects as a front-end and back-end developer using technologies like PHP, NodeJs, Django, Bootstrap, CSS, Vanilla JavaScript, and databases as MySql, PostgreSQL.

As a UI Designer, I design friendly and interactive user interfaces that bring a better user experience. I use Figma and Adobe XD to make my designs. I'm currently available to work if you are interested, here is my contact information.

Outside of work, I'm a simple guy that spends his free time playing video games, watching sci-fi movies, and going out to clear the mind.
